Amp Academy — Admin / IT & Privacy Guide

How Amp Academy deploys, what it does and does not collect, and how the optional institutional backend handles student data — written to a FERPA standard.

For IT / administrators · deployment, data handling, security, privacy.

1 · What gets deployed

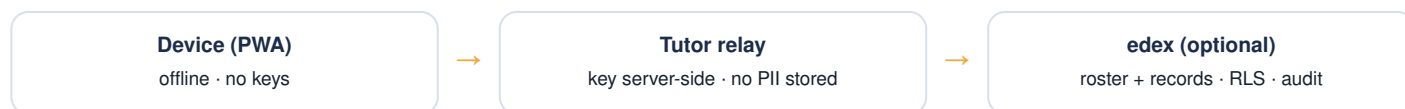

Amp Academy apps are **installable web apps (PWAs)** — one page each, served over HTTPS, that install to a device and run **fully offline** via a service worker. **No native installer**, no runtime, no admin agent. On a managed fleet, point devices at the URL (or push via MDM) and “Add to Home Screen.”

Representative UI · demo.

2 · Data: what is and isn't collected

MODE	DATA COLLECTED	WHERE IT LIVES
Free / standalone (default)	None. No login, no account, no analytics, no ads.	On the device only (local progress).
Rostered (optional, edex)	Only what a program needs: enrollment, progress, assessment results, completion.	Your institution's backend (Supabase), behind the wall.

3 · The optional edex backend (institutional)

When a program needs a roster and verifiable, auditable completion, **edex** turns the free tools into a managed program. Built **FERPA-first**:

- **No keys in the client** — apps never hold secrets; the relay and edex hold keys server-side (house rule §2.7).
- **Row-Level Security (FORCE)** on every table holding a student record — a student/org sees only its own rows.
- **Append-only audit log + §99.32 disclosure log** — every access/disclosure recorded immutably.
- **Right-to-erasure + retention** — student data can be exported and erased on request; retention enforced.
- **Sub-processor** — Supabase (Postgres). A DPA is part of the counsel package.

edex · roster + verifiable completion

Light

**edex — Instructor Console**
roster · verifiable completion · gradebook

Cohort: **BASD Demo Cohort** PREVIEW · SYNTHETIC DATA

STUDENT	COURSE	STATUS	SCORE	VIDEO ✓
Sample Student	Multimeter	✓ Complete	88%	✓
A. Demo	Journeyman 2023	In progress	—	—
B. Example	Journeyman 2023	✓ Complete	91%	✓
C. Trainee	Estimating	In progress	—	—

edex is **built and staged** but **not yet deployed with real student data** — student records activate only after counsel (FERPA/DPA) sign-off. Rows above are synthetic.

Preview · synthetic data. Activates only after FERPA/DPA sign-off.

4 · Security posture (summary)

CONTROL	HOW
Transport	HTTPS only; static hosting for the apps.
Secrets	None in client; relay/edex hold keys server-side.
Access control	Postgres RLS FORCE + SECURITY DEFINER identity helpers; anti-escalation + cross-org integrity triggers.
Auditability	Append-only audit + disclosure log via triggers; idempotency keys.

5 · Deploy checklist

- 1 Apps: serve over HTTPS / push the Campus URL to devices (MDM or manual install).
- 2 Confirm offline launch on a sample device (install, airplane mode, open a lesson).
- 3 Rostered only: stand up Supabase, apply the edex migrations, set relay/edex keys server-side.

4 Counsel gate: complete the FERPA / DPA review BEFORE entering any real student PII.

5 Go live with one cohort; verify roster + completion + audit log.

Hard gate: no real student PII enters edex until counsel completes the FERPA / data-protection review (DPA, consent, retention, breach-notice, state riders). The backend is built and staged to make that review fast — not to replace it.

Amp Academy is a study aid — not a substitute for the printed NFPA 70 (NEC) — and makes no accreditation, pass-rate, or endorsement claims.
